Experience and know how

15 years of experience

Throughout this implementation period we have acquired a high know-how and experience, which allows us to offer a quality service to our customers nowadays.

In order to face an increasingly demanding and competitive global market, we have specialized human resources in the creation and development of new products, always having quality and efficiency as a primary objective in all our production process.

The effort and merit of our employees, as well as the excellence of our products, culminated in the certification process.

High quality colour lacquering

Portas Arcuense provides lacquering service for all sectional doors in 12 preferential RAL colours and in several metallic colours, as well as according to the British Standard.

The lacquering 2K PUR on the outside or inside, or the Coil-coating process in double panels on preferential colours provides a high-quality finishing – as well as long lasting beauty to your sectional doors.

Dark colours should be avoided in doors that are exposed directly to the sun, since a possible bending of the panels could limit the functioning of the door (bimetal effect).

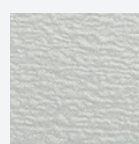

Colour illustrations are not binding
for technical printing reasons.

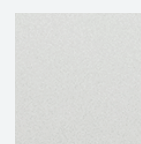

Our panel with a density of $\pm 45 \text{ Kg/m}^3$, a thickness of 40mm with protection against finger entrapment is mainly robust and offers a good thermal insulation of $\pm 0.14 \text{ W/mk}$.

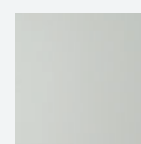

The door panel can be provided with Stucco, Micrograin or Smooth surface finishing.
